TDR00 SERIES
TF/TX

**Vertical in-line
circulation pump
50-60Hz**

PRESENTATION

Hydroo Pump Industries SL is an enterprise specialised in the research, development and large-scale production of Stainless Steel centrifugal pumps. We have a vertical integration of the production processes, standing out stamping, welding and motor wiring in 6 value centers and production units. All of them with a high performance management on pump engineering and production quality.

HYDROO has set up a wide range of pumping solutions for many applications as building services, industry, irrigation and industrial process. Customers enjoy of the highest performance in booster sets and pressurization, fire-fighting sets, pumping of underground water, HVAC, drainage and sewage, utilities, desalination and OEM integrations. Versions in 50 Hz and 60 Hz are available, as well as any modification on materials, on request.

Global water challenges require excellence in pumping technologies and close cooperation between pump designers,

manufacturers and pump engineers. In order to better meet the customers' needs and requirements our company is facing an expansion of its operations worldwide, providing timely and effective services in more than 30 countries. With tight relationships in many regions, we're proud to introduce a new regional value center for Europe. We are based near Barcelona at the Girona industrial area. **Hydroo** is a trademark to forge excellent and successful business relationships with our value customers by means of an operative assembling unit and an application engineering unit. **HYDROO** trademark wants to symbolize the firm commitment for a high level service to our value partners.

At Hydroo we bet on a high level service to our value pump partners.

TDROO

Vertical in-line
circulation pump

Applications

Cooling water
Water supply/distribution
Drainage
Irrigation
General industrial services
Boosting

Description

Vertical in-line circulation pumps.
Standard totally enclosed, fan cooled,
insulation class F, IP 55 motors. Single
phase motors up to 2,2 kW.

Standard versions are suitable for
smart pumping of clean water with a
temperature range between -15°C to
110°C, on request.

F: Cast Iron Impeller
X: SS304 Impeller

Performance range

Capacity: Q up to 750 m³/h

Head: H up to 90 m

Temperature: T up to 110 °C

Speed: 2900/1450 rpm
3500/1750 rpm

Power: P up to 132 kW

Standard material

Casing: Cast iron
Shaft: Stainless steel
Impeller: Cast iron
or stainless steel 304.

Introduction

TDROO Series are single stage in-line centrifugal pumps, equipped with standard motor and mechanical seal. Comparing with other pumps in similar structure, these pumps are less accessible to the impurity in the liquid.

The pump is designed to be pulled out from the top when disassemble. It can be repaired without affecting the pipelines.

The mechanical seal for TF, TX200 and above is cartridge mechanical seal. Motor needn't to be disassembled when replace mechanical seal.

TF, TX125—TF, TX150 products have two structures, one is easy maintenance structure, using a cartridge mechanical seal. And another is expansion shaft structure.

Curve conditions

Following conditions are suitable for the performance curves shown above.

1. All curves are based on the measured value of motor 3 X380V, 50Hz: under the constant speed of 2900rpm, 1450rpm or 1480rpm; 60Hz: under the constant speed of 3500rpm or 1750rpm;

2. Curve tolerance in conformity with ISO9906: 2012, 3B.

3. Measurement is done with 20 °C air-free water, without impurities.

4. The operation of pump shall refer to the performance region indicated by the thickened curve to prevent overheating due to too small flow rate or overload of motor due to too large flow rate.

5. If the thickness and density of the pumped liquid is different from water, the motor power should be adjusted.

Minimum inlet pressure NPSH

In case that the pressure in pump is lower than the steam pressure used to convey liquid, the cavitations will occur. To avoid cavitations, a minimum pressure at the inlet side of the pump shall be guaranteed. The maximum suction can be calculated with following formula:
H=PbX10.2-NPSH-Hf-Hv-Hs
H—Maximum suction head (m)

Pb—Atmosphere pressure (bar)
In a closed system, Pb means system pressure(bar)
NPSH—Net positive suction head (m)
It can be read from the point of Max.flow rate shown on NPSH curve.
Hf—Pipeline loss at the inlet (m)
It is in accordance with pipeline possible Max. flow.
Hv—Steam pressure (m)
It depends on liquid temperature and steam pressure value.
Hs—Safety margin (m)
Minimum 0.5m delivery head.

If the calculated result H is negative,the pump may run under the Max. suction head H. In case the calculated result H is negative, adelivery headof Min. inlet pressure is necessary.

Note: Normally, the above calculation will not be done. H is calculated in the following conditions:

- 1. The liquid temperature is comparatively higher.
- 2. Liquid flow exceeds rated value.
- 3. Suction head is comparatively large or inlet pipeline long.
- 4. System pressure is too low.
- 5. Bad inlet condition.

Applications

The pumped liquid is clean, thin, non-corrosive, non-flammable, and non-explosive liquid which shall not contain any solid grain and fibre that might damage the pump mechanically or chemically.

The detailed requirements on the liquid is in Table 3. If the liquid viscosity or density is beyond the required level, the performance curves will descend and energy consumption will be increased.

Liquid temperature:-15 °C ~110 °C
Max. Working pressure: Normal type: PN12 bar; special type: PN 16 bar.

Liquid		Max. temperature	Liquid requirement	Application
Water	Groundwater	< 90 °C		TD pumps are applicable for urban water supply, industrial water, cooling system, and cold & hot water for regional heat supply system: 1) main circulation pump 2) mixed circuit pump 3) boiler mixed-flow pump 4) gas-fired freezer pump 5) filter pump 6) constant pressure system pump 7) urban hot water circulation
	Boiler feed water	<110 °C		
	District feed water	<110 °C		
	Condensate	<90 °C		
	Softened water	-15 °C ~ 110 °C		
	Alkalescent water		Weak alkalescence	
	Cooling and cutting lubricant		Additive and little impurity may damage the shaft seal	
Coolants	Hydrocarbon based antifreeze	<50 °C	Little rime may damage the shaft seal	TD pumps can be used in chemical industry, pharmaceutical industry, food processing and so on. 1) liquid feeding 2) system pressure boosting 3) mixed circuit circulation pump
	Alcoholised compound	<50 °C 50%		
	30% brine (Nacl, Cacl2 solution, etc)	<50 °C	Little rime may damage the shaft seal	
Organic solvents	Isopropyl alcohol	≤60 °C	Flammable liquid	
	Propyl alcohol	≤60 °C		
Oxidants	Hydrogen peroxide	≤60 °C 20%		

Installation requirements

Some detailed requirement of installation is as below, The concrete request is as following:

1. If the system pipeline can support the pumps, pumps with 2.2kW motorpower(including 2.2kW) can be hung in line; if the system pipeline cannot support the pumps or the pump motor power is higher than 2.2kW, the pumps must be installed in brackets or base.

2. Pumps with motor power lower than 2.2kW(including 2.2kW) can be installed horizontally or vertically to the pipeline. Pumps with motor power higher than 2.2kW, can only be installed vertically to the pipeline (see 2-A). Nanfang Pump Industry Co.,Ltd.

3. The pump installation shall not allow the system pipeline tensile force to be transferred to the pump body.

4. The pump should be installed in the environment with sufficient cooling and the cooling air shall not be above 40°C.
5. If the pumps are installed outdoors, there should be covers to protect electric components from water.

6. For the convenience of maintenance, there should be enough space above and below the pumps. Minimum 300mm shall be kept for pumps with motor power lower than 5.5kW, and minimum 1000mm for pumps with motor power higher than 5.5kW (including 5.5kW). (See 2-B)

7. To prevent noises and vibration and ensure the best operation, anti-vibration base shall be used in installation. Generally, cement base with the weight equal or bigger than 1.5 X pump weight shall be adopted. (See 2-C).

8. For TF,TX 32 to TF,TX 150, pumps with bases or without bases are both available for customers requirements. (See appendix TF,TX 32-TF,TX 150 for base dimensions).

Installation requirements

For power ≤2.2kW

For power >2.2kW

Figure 2-A

For power <5.5kW

For power ≥5.5kW

Product structure and component material

The design of the pump is pump and motor.Pump part can be pulled out. The TDROO series are equipped with standard motor and mechanical seal. Motor is TEFC standard motor. Its major dimensions are in conformity with JB/

T8680 standard. The pump body is equal to a section of pipeline. While in maintenance, blind flange can be used to seal to pump cover which enable the normal operation of pumps.

The flange connection dimension are in conformity with the related provisions PN16 in GB/T 17241.6 orISO7005-2/ DIN2501.

The inlet and outlet diameters are inconformity with related standard dimensions.

The pump head is to connect motor and the pump. 'O' ring is used to seal the pump head and the pump.

See Table 4 for component materials.
